

**Note: This map shows population-level risk estimates only. Doctors must consider individual-level risk separately as well, as this will likely vary independently of the areas shown.**

***Therefore individuals living outside of the hotspots may still be at high risk.***

***In addition Māori or Pacific children living anywhere in Auckland are at relatively high risk***

**Rheumatic Fever Notifications  
Jan 2000 - Aug 2009**

**Hotspots**

- Risk Above Baseline
- Moderate Risk
- High Risk
- Very High Risk
- DHB Boundary
